

How could a company take advantage of Deep Learning?

Deep learning could help a company to perform these automated tasks:

- Read, understand, and pick up only relevant information from large set of documents that company holds.
- Identify objects inside the office (for example: desk, light, kitchen, monitor, CPU, size-object, etc.) in order to reorganized it better the place of work so that all professional can be able to work more comfortable and be more productive.
- Provide reports including graphs to give better understanding about any topic that company handles with high priority like for example: company revenue and review what pro and cons points should be analyzed more carefully.
