

How to make new money incomes?

It is hard to find Community for money. Anyway, Engineers feel proud of that.

But nowadays, it is relevant to make money. One of the applications that I have built, it is a Virtual Chat. It is basically an elemental idea, at this right moment. Application mentioned was already built up.

My idea to convince an Entrepreneur to continue with the development of it, it is that I already know how I computer can respond.

I can share it with the Entrepreneur. How to make look a Virtual Person more realistic. So that, the conversation between User and Virtual Person can be more humanly natural.

There is an alternative. It is completely normal that Virtual Person can say: *"I do not know about that"*

Not all the time, either a Virtual Person or True Person will be able to answer any User's question or prompt.
