

How do you plan to invest in the Stock-Market?

In case, I wanted to foresee the next *Action-Value*, for a specified Company and Stock-Market, I may use a paper board where I can write down the note's behavior about that Action, reading that Stock-Market.

Reading Graphs and its Values, using my intuition to see what *Action-Value* is going to be.

I invest in same Company and *Action-Value*, in order to keep in practice. Using a real scenario and situation.

On my side, I tested this last paragraph mentioned in Stock-Market. Even though, I could gain money.

Besides, I compare Companies, how they are behaving in Stock-Market because Companies are like people.

It is obvious and understood, Companies and can hold too much.

An Entrepreneur/Person cannot hold as many people as he/she would like to. But he/she may either buy or sell *Action-Value* by his/her own.

Also, an Entrepreneur/Person can provide Professional Services.

Company can perform more actions. Because, they have many people to trigger many working-tasks.

But, if I compare Entrepreneur/Person versus Company, it is almost quite the same.
